1.

1 / 1 poin

The Lunar Lander is a continuous state Markov Decision Process (MDP) because:

- ☐ The state-action value $Q(s, a)$ function outputs continuous valued numbers
- ☐ The state has multiple numbers rather than only a single number (such as position in the x -direction)
- ☐ The reward contains numbers that are continuous valued
- ☒ The state contains numbers such as position and velocity that are continuous valued.

Benar

That's right!

2.

1 / 1 poin

In the learning algorithm described in the videos, we repeatedly create an artificial training set to which we apply supervised learning where the input $x = (s, a)$ and the target, constructed using Bellman's equations, is $y =$ _____?

- ☒ $y = R(s) + \gamma \max_{a'} Q(s', a')$ where s' is the state you get to after taking action a in state s
- ☐ $y = R(s)$
- ☐ $y = \max_{a'} Q(s', a')$ where s' is the state you get to after taking action a in state s
- ☐ $y = R(s')$ where s' is the state you get to after taking action a in state s

Benar

3.

1 / 1 poin

You have reached the final practice quiz of this class! What does that mean? (Please check all the answers, because all of them are correct!)

- ☒ The DeepLearning.AI and Stanford Online teams would like to give you a round of applause!

Benar

- ☒ You deserve to celebrate!

Benar

- ☒ Andrew sends his heartfelt congratulations to you!

Benar

- ☒ What an accomplishment -- you made it!
